

You must not limit XM radio. It is an innovation that replaces old outdated technology of the 1970's (namely FM radio). Where would our country be if Thomas Edison's thoughts were squashed? Where would we be if Ben Franklin was forced to abandon his ideas? You can not limit someone's creativity and ability to improve technology, that is un-American. Our country was founded by people taking current gadgets and building them better. Encourage AM and FM to update. Challenge them to get better.
